## **Product description**

The LuxaLight Industrial LED Engine is designed as a high-performance component for intensive industrial applications that require high radiation intensity. With a 660nm wavelength, this LED engine provides an efficient solution for processes that benefit from deep red light, such as plant growth stimulation, tissue regeneration, and more.

This LED engine is a semi-finished product, allowing it to be integrated into custom fixtures or housings depending on your specific requirements. It offers flexibility for use in various industrial, research, and medical applications, where the powerful 660nm wavelength can deliver targeted results. The engine is designed for easy integration into larger systems or custom enclosures.

#### **Key Features:**

- 660nm Wavelength: The 660nm wavelength is ideal for applications that require deep red light, such as horticulture, biological research, and certain industrial processes.
- 24V Power Supply: The LED engine operates on a reliable 24V power supply, ensuring stable and consistent operation, perfect for demanding applications.
- High Radiation Intensity: This LED engine delivers high radiation intensity, making it suitable for high-efficiency processes and applications that require significant light output.
- Semi-Finished Product: The LED engine is designed to be integrated into custom systems or housings, providing flexibility for adapting to various industrial, research, or medical setups.
- Integration with MaNima Pollux Industry Pulsing (Strobing): The LED engine supports integration with the MaNima Pollux Industry System for pulsing (strobing), significantly increasing radiation intensity. This feature allows for faster reactions and improved efficiency in industrial processes.
- Real-Time Temperature Monitoring via NTC Sensor: The integrated NTC sensor ensures continuous temperature measurement
  and adjustment through the MaNima Pollux Industry System. This helps maintain the optimal operating temperature for maximum
  radiation output and consistent performance.

### Applications:

- Horticulture & Agriculture: The 660nm wavelength is highly effective for stimulating plant growth, making it ideal for integration into custom lighting solutions for greenhouses and agricultural applications.
- **Biological Research:** The LED engine can be used in scientific and medical applications for processes such as promoting tissue regeneration, cell cultivation, and photobiomodulation therapy (PBM), assisting in pain relief and wound healing.
- Medical Therapy: 660nm light is used in phototherapy treatments such as skin healing, anti-aging treatments, and muscle recovery, where red light stimulates cells and tissues.
- Food Industry: The 660nm wavelength can be used for applications such as stimulating growth in food production environments or in the pasteurization of certain food items.
- Industrial Material Curing (Non-UV): The deep red light can cure specific coatings and materials that react to red wavelengths, providing effective and fast curing processes in industrial settings.
- Cosmetic Industry: The LED engine is suitable for use in the cosmetic industry for skin treatments such as wrinkle reduction, skin tone improvement, and stimulating collagen production.

### **Benefits:**

- High Radiation Intensity: The engine provides high radiation intensity, allowing for faster reactions and increased productivity in
  applications that require deep red light.
- Flexibility in Integration: As a semi-finished product, the LED engine offers flexibility for integration into custom housings or systems tailored to specific industrial, research, or medical applications.
- Efficient Performance: The LED engine provides efficient performance with stable output, making it ideal for environments that need consistent light delivery.
- Real-Time Temperature Monitoring for Consistent Performance: The integrated NTC sensor, combined with the MaNima Pollux Industry System, ensures continuous temperature monitoring, helping to prevent overheating and maintain optimal operating conditions for long-term reliability.

# **Technical specifications**

General			
Brand	LuxaLight		
Application	Barcode Scanning Machine Vision	Barcode Scanning	
LED type	2835		
PCB color	White		
Material	Aluminum		
Dimensions	200 × 20 × 2 mm		
Mounting	3M tape VHB4905		
LEDs per piece	108.00		
Lifetime	70000 hours		
Lighting			
Wave length	660 nm		
Beam angle	120 °		
LB waarde	L80B50		
Measurement results			
Illuminance (Lux)		24V	
(Object size: 1 piece)	5cm	26980 lx	
	10cm	10420 lx	
	15cm	5294 lx	
	20cm	3242 lx	
	25cm	2179 lx	
	30cm	1653 lx	
Total PPFD umol/m2 (PAR 400-700nm) (Object size: 1 piece)		24V	
(Object Size. 1 piece)	5cm	2485.19 umol/m2	
	10cm	928.214 umol/m2	
	15cm	473.499 umol/m2	
	20cm	295.018 umol/m2	
	25cm	198.704 umol/m2	
	30cm	150.551 umol/m2	
Peak wavelength (Object size: 1 piece)	662 nm		
	resulting in higher output.	with Real-Time Monitoring, the efficiency of LED systems can be increased, dequipment to perform measurements tailored to the specific requirements of	
Electronics			
Working voltage	24V		
Current per piece	1.25 A / piece		
Power consumption per piece	30.00 W / piece		
PCB material	Aluminium		

Symbol	Function
V+	V+
GND	Ground
NTC	NTC sensor
NTC_GND	NTC ground
