# MaNima Magnus

## **DATASHEET**

## Recording and Playing

The MaNima Magnus is able to record and play up to 26 universes according to the WYSIWYG principle.

### Art-Net

The MaNima Magnus can be controlled via Art-Net V1.4. The interface is easy to find and use thanks to the configurable ArtPoll system.

#### External inputs

Scenes can be started via external inputs. These are digital inputs or analogue inputs; 4-20mA or 0-10V. And UDP commands

## Reliable and Stable

The MaNima Magnus has been proven to be a reliable and stable product when used for high-end LED projects.

#### Stackable

Connect dozens of MaNima Interfaces together to create huge LED projects with the least amount of parts.

#### Synchronization

Multiple MaNima Interfaces can synchronize when playing scenes through a master and slave setup.

## **EMC Tested Product**

All of MaNima's products are EMC tested and can safely be used in critical applications.

## Easy-to-use GUI

The settings of the MaNima LED interface can easily be changed by a user via the MaNima LED interface configurator.

## Multiple Protocols at once

Due to the available multiple ports, there is also the possibility of sending different protocols over different ports.

# **Technical Specifications**

|                   | Model                                  | MaNima Magnus  | MaNima Ignis   |  |
|-------------------|--|--|----------------|--|
|                   | Weight                                 | 360 gram   |                |  |
| General           | Dimensions                             | 90 x 159 x 5   | 58 (B x L x H) |  |
|                   | Mounting                               | DIN Rail 35mm  |                |  |
|                   | IP class                               | IP10   |                |  |
|                   | Storage temperature                    | 10°C ~ 60°C  |                |  |
|                   | Operating temperature                  | 10°C ~ 40°C  |                |  |
|                   | Warranty                               | 5 Years  |                |  |
|                   | Directives                             | CE, RoHs   |                |  |
|                   | Wiring                                 | Max 1.5mm²   15 AWG  |                |  |
|                   | Own Power Consumtion                   | 1,5W   |                |  |
|                   | Efficiency                             | Approx. 99,8%  |                |  |
|                   | Power Input                            | 12-48VDC 200mA Max   |                |  |
| Input             | DMX512 Inputs                          | 2 inputs (or output)   |                |  |
|                   | Digital Inputs                         | 5  |                |  |
|                   | Analogue Inputs 0-10V or 0-20mA        | 6  |                |  |
|                   | Ethernet                               | Ethernet terminal connector: RJ45 bus                                |                |  |
|                   | Input protocols                        | ArtNet, sACN   |                |  |
|                   | SPI Outputs                            | 6 outputs with data, clock and ground                                |                |  |
|                   | ArtNet Universes                       | up to 26 universes total (see 'supported IC's' for more information) |                |  |
| Output            | DMX512 Outputs                         | 2 Outputs (or inputs)  |                |  |
|                   | Max FPS                                | Depends on IC type, see 'supported ICs'                              |                |  |
| Electronic        | Over voltage protection                | Yes, up to 50 Volts  |                |  |
| Protection        | Short circuit protection               | Short circuit protection on Power Input (< 10µs response)            |                |  |

| LX3203, LX1603, LX1103                                | 6 (1020 LEDs)    | 3 (510 LEDs)     |

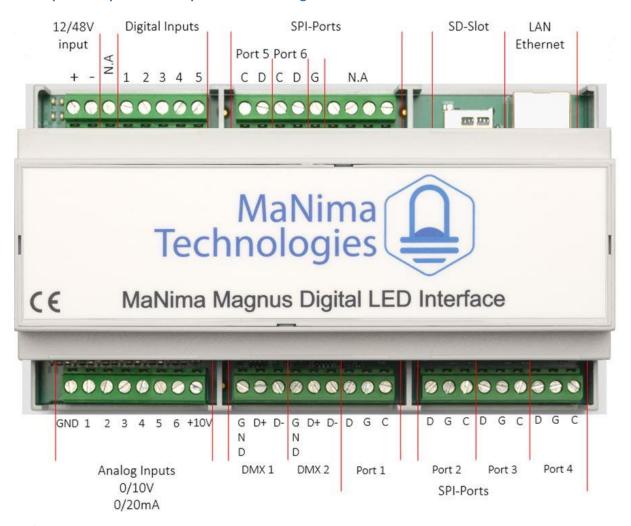

<sup>\*</sup> Theoretical maximum amount, please contact us for further assistance when using APA strip.

## **Connection Diagram**

Descriptions of ports from top left to bottom right:

**12/48V input:** Connect 12-48VDC to this connector.

**Digital inputs:** Digital inputs are inputs used to control the MaNima LED Interface with voltages between 5V and the input voltage (maximum 48V).

**SPI-ports (1-6):** These ports are used as outputs for the Data (D) Ground (G) and the Clock (C). Every port has a D, G and a C output. These ports make sure the LEDs will receive the digital signal.

**SD-slot:** An SD-card must be placed inside this slot. Settings and recorded scenes and saved here.

**LAN/Ethernet:** To connect to a network, a LAN or Ethernet cable must be connected to the MaNima LED Interface, using this port.

**Analog inputs:** These inputs are used as analogue channels. The +10V is used for these connections (it can also be used for the digital inputs).

**DMX 1-2:** These ports are in- or output ports that can transmit DMX data to LEDs or receive DMX data to control the Magnus.
